Life cycle

@learn.machinelearning

BUSINESS UNDERSTANDING

- success of any project depends on the quality of questions asked.
- Every business or domain will have their own goals and rules.
- If you understood the business requirement correctly, it helps you to collect the right data.
- Asking the right questions will help you to narrow down the data acquisition part.

@learn.machinelearning

Data Collection

- There is no Data Science without Data.
- Data is very important for making any data science project.
- Data is everywhere it can be logs, repositories, databases, social media, newspaper, journals, online, websites, etc....
- If you ask the right questions in step - 1, it helps you to choose the right data source.

@learn.machinelearning

Data Preparation

- Data can be in any format. To analyse it you need to have data in certain format.
- It could also be said that data needs to be cleaned before processing any further.
- This step is also known as Data Cleaning or Data Wrangling.

@learn.machinelearning

Exploratory Data Analysis (EDA)

- EDA plays an important role at this stage as summarization of clean data helps in identifying the structure, outliers, anomalies and patterns in the data. These insights could help in building the model.

#567

@learn.machinelearning

Building the best model by
evaluating it and finally deploying
the model to production so users
can use it.
