Tips to make you awesome in

Your Data science Job

1. Understand the business before you start solving problems.
2. Think hard of whether you are solving an underlying problem or just an outcome
3. Spend more time on finding out the right evaluation metric and how much is required for implementation
4. Follow the diverge-converge thinking process to avoid pre-mature convergence
5. Break industry silos to think of alternate solutions
6. Engage with business counterparts throughout the process
7. Think of simplest implementation levers to bring your idea to life
8. While making a business deck, make sure you lay it out in their language
9. Learn to speak business language while presenting to business leaders
10. Actively follow up on the implementation plan
11. Actively participate in Data Hackathons
12. Read blogs and books on upcoming tools and techniques on analytics
13. Learn upcoming tools to know what is possible and what is not
